## South East Lincolnshire Local Plan 2011-2036 Preferred Options Consultation May 2013

Chapter_Name:	10 Transport			
Response_Number:	6	Persons_Name:	Carol M Burton	Representing_Who?: Herself
Respondents_Comme	nts:	Officer_Response:		Officer Recommendation:
Response_Number: 6  Respondents_Comments:  The town centre is often congested with traffic and I have indicated in a previous letter to Cllr Gambba Jones that I would believe some of it is caused by the conglomeration of food shops (i.e. Supermarkets) on one side of the town. This causes all who live on the other side of town to drive across the town centre instead of outwards in the other direction. We need at least one full sized supermarket in the area beyond Clay Lake where I believe commercial development is already approved. Previous planning policy with regard to Holland Market needs to be reviewed. With reference to congestion caused by street parking which is becoming a huge problem, why not make all the car parking free and charge substantially for parking on the street. Residents without a drive or a garage of their own could have an exemption license. The town bus Route needs to be extended to include the new Johnson Hospital on its regular route. The bus station needs to be refurbished with a waiting room provided		Persons_Name: Carol M Burton  Officer_Response:  Comments noted. Parking fees and bus routes are not within the remit of the Local Plan. The preferred policy approach to 'Town and Other Centres' seeks to identify floorspace requirements for the plan period. The location of any new planned retail allocations will be considered in due course through the Site Allocations DPD.  These considerations have been taken forward in the draft Local Plan where new policies and amendments have been proposed.		Representations beyond the remit of the Local Plan or to be addressed in the preparation of the Local Plan

and someone in overall supervision of the site.

Respondents\_Comments:

I was able yesterday to visit the Spalding offices of South Holland District Council to view the display on the proposed Local Plan for this area, and was a little surprised to see the proposed route for the Spalding Western Relief Road.

I have been resident in Pinchbeck for nearly twenty years – before the current Spalding by-pass (the present A.16) was built, and experienced the volume of heavy commercial traffic passing through the village. This was to some extent alleviated by the opening of the new by-pass, but in my opinion this still left part of the problem unresolved. Traffic coming from north or south of the town of Spalding can easily bypass the town now, whist there is reasonable access to the east. However, traffic coming to the area from the west – from for example Bourne or Grantham or further afield reaches the outskirts of Spalding or Pinchbeck and then has to negotiate our narrow roads with parked vehicles etc. There was a partial attempt to alleviate this problem by building the 'link road' (now the A.152) from the A.16 to the former A.16 to the north of Surfleet, but from personal observation this does not carry a lot of commercial traffic.

In my opinion, therefore, this link road should be extended from the roundabout at the B.1356/A.152 junction, proceeding westwards to by-pass Surfleet, West Pinchbeck, and crossing the A.151 (Bourne Road) before connecting with the A.16, thus in effect providing Spalding and Pinchbeck with a circular bypass. When such a relief road is opened the area within the circle should have a ban on H.G.V.s and the like except for access. We have to think of the impact that the proposed rail hub at Deeping St Nicholas with the associated additional H.G.V. traffic will have on un-bypassed towns and villages

Apart from the traffic problems outlined above, I also consider the land to the north of Vernatt's Drain (falling Persons Name:

Mr A R Boyer

Officer Response:

A detailed Infrastructure Delivery Plan (IDP) will be drawn up to support the Submission Version of the Strategy and Policies DPD outlining how necessary infrastructure to support growth will be delivered. As regards the extension of the SWRR, it is likely given that funding in the main will have to come from housing development, that such an extension would be wholly undeliverable. The County Council is presently working on a detailed route for the SWRR, which will be subject to public consultation. The preferred policy approach 'Broad Locations for Housing Development in Boston and Spalding' seeks to maintain a gap between the existing built-up area of Pinchbeck and the new development. Detailed site boundaries for this development will be considered through the Site Allocations DPD in due course.

These considerations have been taken forward in the draft Local Plan and are also evidenced in the supporting papers e.g. SHLAA and Housing Papers.

Representing\_Who?: | Himself

Officer Recommendation:

Objection - Further work required which could result in a change to the approach.

within Pinchbeck Parish is not a suitable area for housing development. This short length of currently farmland provides an instantly recognisable boundary between Spalding and Pinchbeck, and if development is allowed thereon there is the risk of the smaller village being absorbed into the larger town to the detriment of the quality of life of existing Pinchbeck residents. We also have to consider the impact that such development would have on the infrastructure of the area – schools, medical facilities, waste disposal, sewage, and so on.

I trust the planning committee will give these comments their full consideration.

Response_Number: 125	Persons_Name: Freya Trotman	Representing_Who?: Herself
Respondents_Comments:	Officer_Response:	Officer Recommendation:
This is a difficult issue to address. It might help to implement a "car Sharing database" and perhaps the council could make special provisions with insurers to help car owners utilise this without being penalised. The purple bus service is an essential part of rural life particularly for the young and elderly, but provision of service is patchy. Could this be extended. Also Extending the safe cycle and walking routes would be a good ides. Perhaps food processing firms and larger employers could provide buses which pick up points for	Comments noted. Respondents Comments:

Road Repairs. In addition to a deplorable record of road safety the roads themselves are in a desperate state of disrepair. How can the document comment on developing and providing new housing and planning when the supporting road network and transport infrastructure are so poor? The council and the Government at local level, upwards plead poverty at the very mention of road repairs to existing roads. Equally how can we hope to attract new business and investment to the area (let alone foreign investment) when our road structure is as disgraceful as any I have seen in the third world. If we were to seriously address the improvement of our roads this could be another area where the unemployed could help get us back on track for better economic growth. We are not currently providing sustainable development to meet the needs and growth of South East Lincs unless the state of our roads is what was meant in section 8 "the environment" I doubt that when the document states "minimising the need to travel", meant that some roads be allowed to become impassable.

Response Number:

433

Respondents\_Comments:

Having read the consultation documents on the Local Plan, I would like to make the following points about the proposed Spalding Western Relief Road:

1. The map suggests that the road will follow a line just north of

Vernatt's Drain, joining Pinchbeck Road near the entrance to the Enterprise Way Industrial Estate. There is no indication as to how traffic from the Relief Road, a considerable proportion of which will be lorries, will then find its way onwards. Pinchbeck Road is already very congested during peak periods, and neither it nor the roads through the Industrial Estate will be capable of taking the extra traffic generated.

2. Vernatt's Drain and the farmland beyond, which it is envisaged will

be taken for the new road, constitute an important wildlife habitat, particularly for birds. We currently have significant numbers of swans, heron, cormorants, tufted ducks and great crested grebe amongst the more common mallards and coots. In summer the banks provide a temporary home for large numbers of warblers, swallows, swifts and martins. Birds of prey frequenting the area include owls, kestrels, sparrow hawks and buzzards, doubtless soon to be joined by red kite. I have also on occasions seen little egret, shelduck and even a pair of white storks.

The importance of the area as a wildlife haven right on the edge of Spalding needs to be recognised, but I have seen no acknowledgement of this in the consultation documents. What will be done to preserve the area for wildlife with a major road a few yards away?

3. It is proposed that the new road will cross the railway by means of a bridge, obviously a very large one. Those of us living near the railway line are already resigned to the

Persons Name:

Martin Blake

Officer Response:

This issue has been adequately addressed in the Preferred Options Document. The County Highway Authority has established the need for a SWRR. Once completed the impact of the road will be monitored and the need for any further road improvements will be considered. The final line of the road will be designed with a view to minimising environmental impacts.

These considerations have been taken forward in the draft Local Plan and are also evidenced in the supporting papers e.g. SHLAA and Housing Papers.

Representing\_Who?: | Himself

Officer Recommendation:

Objection - No change to the approach is required.

likelihood of a significant increase in freight traffic along the line from next summer, but the proposed road bridge will ensure in addition that traffic noise, at all hours of day and night, will be broadcast over a very wide area. Since it will also be highly visible, it will result in a significant loss of visual amenity. If the route for the Relief Road is to fall within the Corridor of Search as per the map, it is essential that the road crosses the railway by passing beneath it if residents in the surrounding area are to be left with any quality of life.

Infrastructure Delivery Plan work.

Response Number: 681 Persons Name: Respondents\_Comments: If there is no policy regarding a distributor road, then that will effectively ensure that one cannot happen.

Officer\_Response:

Cllr A Austin

Representing\_Who?: | Herself

Failure to include such a policy further threatens the economic viability of Boston as new businesses are reluctant to come to the town because of perceived / actual congestion issues. Others move elsewhere. Not only does this have a negative impact on economy and employment, it also encourages more people to travel to elsewhere from Boston to work each day.

This plan must include a broad search area for the route of a distributor road, at least as detailed as the one shown in figure 10.1. Without this there can be no possibility of a joined-up road ever coming into existence within the lifetime of this plan or beyond.

A plan must be drawn up and included at this stage so that should any contributions from developers be forthcoming in the future, they can be meaningful and directed to help start a section of the road.

The Preferred Options Document does make reference to the 'Boston Distributor Road.' This scheme remains an aspiration. However, the delivery of housing growth at Boston is not reliant upon its implementation. In the absence of any modelling work or technical evidence of need and costs, it is not possible to include a policy for delivering a Boston Distributor Road at present, as it cannot be evidenced that there is a reasonable prospect of it coming forward in the plan period.

These considerations have been taken forward in the draft Local Plan and are also evidenced in the supporting papers e.g. SHLAA and Housing Papers.

**English Heritage** Response Number: 709 Persons Name: Tom Gilbert - Wooldridge Representing\_Who?: Officer Recommendation: Respondents\_Comments: Officer\_Response: Support - No change to the approach is required. Support noted.

We note the current position regarding the Boston Distributor Road and the lack of evidence to suggest that its implementation is critical for the delivery of Boston's growth to 2031 (paragraph 10.2.2). We have previously advised on this scheme in our letter to the county council's consultants dated 11 February 2008 (copy can be supplied if needed). The impact of the scheme on heritage assets around the western side of Boston could be considerable, particularly given the high archaeological potential of the landscape and the

proximity of designated assets. There could also be impacts on views to and from St Botolph's Church, given that any road would need to be elevated to cross the railway line and several

watercourses. At the same time, relieving traffic congestion through Boston town centre would be of immense benefit to the historic environment and help to repair severed streets and derelict buildings. However, whether a distributor road is the only option to relieve such congestion remains to be proven, and it is highly likely that other less intrusive and expensive options could also help. The requirements set out in the draft policy on sustainable transport all seem sensible.

 infrastructure?
 The SA will be revisited in the next stage of the plan Objection - A minor change to the approach may be

We have previously provided advice on the SWRR in a letter dated October 2011. We do not have a strong opinion on the proposed road, although it may have benefits in terms of relieving traffic congestion through the historic core of Spalding. At the same time, the relief road will need to be carefully planned to avoid harming heritage assets along the route, particularly in terms of undesignated archaeology (but also designated assets such as the Grade II\* listed Monk's House). It is therefore incorrect to say in the Sustainability Appraisal that the SWRR option has a neutral impact on the historic environment (paragraph

10.14.7). The draft policy and/or supporting text could make reference to the environmental issues that need

to be addressed by the SWRR.

The SA will be revisited in the next stage of the planmaking process and the comments made will be taken into account.

Objection - A minor change to the approach may b required (e.g. detailed policy wording/SA scoring).

Response_Number: 723	Persons_Name: Steve Williamson	Representing_Who?: Mrs EA Wing, Mr JA Wing, Mrs A For
Respondents_Comments:	Officer_Response:	Officer Recommendation:
ransport raragraphs 10.1.18 to 20 refer to the LTP3 assumptions hat development land can help acilitate the possibility of a distributor road to the outh west of Boston, and to a technical nalysis that has shown that a distributor road is ppropriate. These are opaque statements bout an issue that must be openly debated in order to lemonstrate political probity and have planning credibility. Reliance on these part analyses will be formally challenged if they remain as part of a justification for a concentration on leveloping to the south west of Boston. This position is reinforced by the statement in paragraph 10.2.2 that "There is no evidence to luggest the implementation of a Boston Distributor toad is critical for the delivery of the growth strategy for Boston to 2031."	This issue has been adequately addressed in the Preferred Options Document. ## Respondents\_Comments:

In response to Q74,75 76

The budget for transport has been spent mainly on transport for schools due to the rural locations and dangerous roads leaving little over for public transport. It is my understanding the council regularly ask council residents to complete surveys with regards to transport (DSN). These results are not shared with Parish council or local groups such as Spalding and Peterborough Transport Forum and Pedals which would be of use. Lessons could be sought from Peterborough which was a sustainable travel demonstration pilot promoting travel plans, car share and cycling. These have been suggested to SHDC on many occasions via SPTF and Pedals.

Investment into the existing railway network would be more viable with integrated shuttle busses from the sub regional to the rural area's reducing the need to travel by car.

We are currently expecting a further 2 trains per hour to be increased to 4 when the upgrade is completed with the hub proposal we could be looking at 13 trains per hour which would not leave much capacity for improvements for passenger usage which is portrayed as a benefit for local community. Increased population which has already been identified a recent survey shows there is a real need for improvements on passenger services in the area as people are having no alternative to travel to work by car which is not sustainable. 41% of residents in DSN work in Peterborough without the feasibility study. I would like to see Protection for existing passenger service and guarantees of improvements as well as new stations to support and encourage sustainable passenger travel.

Our line is being upgraded for freight trains by 2014. This affords the opportunity for an improved passenger service - more frequent, longer period of operation and Officer Response:

The consideration of a policy dedicated to the reopening of Littleworth Station is not an issue that has been dealt with directly in the Preferred Options document. As such, this represents a new option for consideration, which will be addressed in the next stage of the plan-making process.

Officer Recommendation:

Objection - Further work required which could result in a change to the approach.

Sunday services. But (i) there is no certainty of this. So, would a freight hub bring that certainty by levering funds to improve the passenger service? this opportunity is not mentioned in SHDC's consultation leaflet we would like to see guarantees that a station is proposed for DSN at least as a minimum.

Response Number: 1197 Respondents\_Comments: Who deemed this development to be critical. Many do

not, and if there is a need for this road why add more housing to clog it up? What money will be set aside for compensating

residents for road noise, construction noise and a reduction on living standards and house values. Spalding needs a much larger capacity in its sewage capabilities before any of this can go ahead. Why add to the problem?

Why be so vague about the area where housing is proposed? Broadgate builders bought Darley's out for £4million (more than intrinsic value) so an outline of that area would be more honest.

Will the road be noise shielded?

What environmental/ wildlife studies have been carried out?

What will be done to protect residents in quiet lanes from increased traffic?

How will you keep the Two Plan footpath open at all times? It is heavily used by many who are unable to afford a car.

How do the Council propose to give the go ahead to building on land that has no building covenants on the deeds?

Respondents\_Comments:

It is felt that the wording of the two Transport Priorities in Ch. 3 could be clearer, and that they need to refer more directly to public transport, cycling and walking. Also relevant sections now need to refer to the 4th Local Transport Plan for Lincolnshire. LCC is pleased to see that the Document recognises the strategic importance of the Spalding Western Relief Road (SWRR) in a specific Preferred Policy Option and begins to consider some of the factors that will influence delivery.

The document notes that the Local Transport Plan and the Transport Strategy for Boston both refer to the possibility of a distributor road to the west of Boston. Such transport infrastructure could deliver benefits to the broad locations for development set out above if through its construction it reduces the consequence of flood risk, as well as wider benefits. Broad locations for development which are currently in flood risk areas may be influenced as a direct result of new transport infrastructure. The Environment Agency has stated, however, that it would not designate any such infrastructure as a formal flood defence. Amplification of Para. 29, 1st sentence in Executive Councillor Briefing Note)

Priority 10 refers to "improve accessibility ... thereby minimising the need to travel". The link between these two statements is not clear. Improving accessibility is usually about enhancing transport networks/services to enable easier or quicker travel rather than actually reducing the need to travel, which is best achieved by locating new development adjacent to existing or proposed employment/education/services opportunities.

Similarly, Priority 11 mentions maximising "modal shift to sustainable forms of transport ... by seeking to improve ..... Highway infrastructure". Again, the linkage here is not clear with most people interpreting

improvements to highway infrastructure as meaning making better provision for the private car (although some infrastructure such as bus lanes and pedestrian crossing can encourage sustainable travel). Perhaps this would be better worded as "Lincolnshire's transport infrastructure" (which could then also encompass rail as well) or perhaps the two elements need separating into two (unlinked) priorities.

REQUEST FOR INCLUSION IN THE SOUTH EAST LINCS LOCAL PLAN Re-opening of Littleworth Station, Deeping St Nicholas It was expected that the re-opening of Littleworth Station, would be included in the draft South Lincs East Local Plan. A feasibility study has been carried out and the study provides the required evidence to support the re-opening of the station. A copy of the feasibility study is to be sent in a separate email communication. We would ask that the re-opening of Littleworth Station, Deeping St Nicholas be included in the South East Lincs Local Plan.	The consideration of a policy dedicated to the reopening of Littleworth Station is not an issue that has been dealt with directly in the Preferred Options document. As such, this represents a new option for consideration, which will be addressed in the next stage of the plan-making process.	Objection - Further work required which could result in a change to the approach.

Questions 77, 78, 70 The map on p.150 (and p. 28 of the summary) shows a significantly different route to the map on p .302 Which is correct?

The Spalding western Relief Road is going to create as many problems as it solves. At the north end the additional traffic generated will join already overloaded Pinchbeck Road at a junction near the Johnson Community Hospital. The existing roads will not cope at busy times.

We had hoped that the Vernatt's Drain would form the natural northern boundary to the development of Spalding, and that there would continue to be a separation between Spading and Pinchbeck. The large extension of urban development to the north of the Vernatt's is not welcome. It appears this is being driven by the need to extract additional funds from the developers to build the SWRR. The SWRR appears to take precedence over the actual need for all this new housing. Has an artificial need been created to fund the SWRR?

The impact of the upgrade of the Joint Line may have been over-estimated. How many extra trains will there be? How fast will they travel? How long will they take to pass through? This information is required to make a judgement.

We are being asked to approve a proposal which has not been thought through and which requires more information and evaluation of rail traffic and road traffic impact.

Officer Response:

This issue has been adequately addressed in the Preferred Options Document. The County Highway Authority has established the need for a SWRR. Once completed the impact of the road will be monitored and the need for any further road improvements will be considered. The final line of the road will be designed with a view to minimising environmental impacts.

These considerations have been taken forward in the draft Local Plan where new policies and amendments have been proposed.

TRANSPORT Comments noted.

The objectives of the County Local Transport Plan are laudable but are the achievable I note that the traffic modelling exercise concluded that the upgrading of the Joint Rail link through Spalding would create an unacceptable level of traffic congestion in Spalding town centre. The upgrading of the track and signalling systems is to be completed before the end of 2013 and that additional freight movements / passes through the town will start before the end of the year. All the town centre facilities lie to the east of the trail track. There are four level crossings in the urban fabric. The major residential developments have been sited to the west of the rail track and traffic modelling has show that the traffic from the Wygate Park residential development zone, with @ 800 homes with valid consents are yet to be completed, suggested that up to 80% of the vehicle movements would exit and egress the development over the Mill Green level crossing. On a projected vehicle movements of 20 per day per house that would suggest potentially up to another 12000 vehicle movements per day. Phase 1 of the WRR will be financed by a development levy on some 2250 dwellings but development has not yet started. Using the same base modelling projections the completed development potential generate up 40000 vehicular movements per day. The original studies envisage further residential development of up to 2500 dwelling units would generate sufficient S 106 monies to fund a connection between the Phase 1 distributor road and the A 151 creating 2 access / egress routes from an urban extension of @5000 + houses in total potentially generating some 80000+ vehicular movements. Were would all this extra traffic go. The bulk of these movements would be into Spalding town centre to access the town centre facilities, the schools. The

Objection - No change to the approach is required.

hospital and GP services, leisure and entertainment services; the nearest location for all these services. Utilising the A 16 Spalding by pass route would involve more than quadrupling the journey distance until the connection between the development and the A 151 was opened. (One of the objectives of the plan is to reduce the length of journeys) The proposal now suggests that the road from the already agreed in principle southern rail bridge will join the A 151 near Pode Hole eliminating the need for a further bridge over the Vernatt's Drain creating in effect a by-pass loop around Spalding avoiding through traffic adding to the congestion in Spalding. (At the request of the Spalding and District Access Group I submitted a response to the consultation on the Traffic Plan LPT3 suggesting this approach.

The Group was advised that our suggestion rose significant (but unspecified engineering problems) would inhibit farm access to their fields and would require demolishing properties leading to excessive compensation claims. What has changed?}. The major urban extension north of the Vernatt's Drain will only proceed if the developer gives an undertaking to complete the WRR plus a rail bridge to join Spalding Road in Pinchbeck.

It seems that the congestion level will increase from 2014 with no possibility of relief until 2031 and even then no guarantee that the congestion will ever be relieved. The solution seems to be that to relieve congestion you need to create more congestion. Spalding is an expanding regional sub centre. As such it is and will increasingly be a destination for vehicular traffic flows. Much of that traffic will arise from inner urban traffic movements including from the addition 7000+ homes to be built to the west of the rail line. The anticipated concentration of employment opportunities in Spalding will add further to the congestion.

A selection of low cost but high tech measures could be introduced to address the problem. The existing road network from the north east south and west can direct traffic around Spalding without having to cross the railway. Insert in the SATNAV System a congestion warning for Spalding and encouraging drivers to use the preferred diversion routes.

Adjust the road signage to divert traffic along the preferred route using interactive electronic signage. Consider widening Park Road through to Hawthorne Bank then a new road parallel the rail track to join the Phase 1 road to the west of the proposed new bridge. The improved signalling system should reduce the existing time delay on each train pass The District Council could allocate semi derelict land north of the Holland Markets for car park development. There are solutions that could alleviate the problem before 2031.

Q74 There needs to be a credible solution to transport issues arising out of Spalding's Potential growth,
